REVIEW OF CURRENT EDITION:

"This is the 4th edition of a popular textbook presently used by many dental schools in North America. For this edition, Dr. Malamed enlisted the help of Dr. Morris Clark, who co-authored the section on inhalational sedation, as well as Dr. Kenneth Reed, who upgraded the section on medically compromised patients. In addition to the improvements engendered by these co-authors, many of the illustrations and diagrams have been updated, and overall the new edition is superior to the third edition. The primary target audiences are pre- and post-doctoral dental students wishing to learn more about sedation and anxiety control. Increasingly, other medical practitioners such as podiatrists, plastic and reconstructive surgeons, and even gastroenterologists are performing office sedation and they too would find this book very useful."

Extensive sedation guide for dentistry

By Joseph W. Nolan

This extensive guide to sedation is well written and very thorough. There are chapters on oral sedation, N2O sedation, and emergency medicine.

I found it very informative.

Sedation and pt management

By Mouth doc

This is a very good book for the clinician who wants to gain an understanding of proper patient management for the sedated patient, rescue breathing for the over-sedated, and how to properly monitor your sedated patient. This is not the book for a person who wants to do just conscious sedation though. It does review conscious sedation, but not very thoroughly. I recommend this book to anyone wishing to increase their understanding of how to manage your patient during sedation as a whole.

Useful reference

By Diana J. Upright

I just completed the dental anesthesia course at dental school and this is the book our class used. I found the book to be very helpful for more than just sedation and I do recommend it. I will be a good reference book for my collection.
