# **WHY OUR CHILDREN WILL BE ATHEISTS: THE LAST 100 YEARS OF RELIGION, AND THE DAWN OF A WORLD WITHOUT GODS BY ALBERT WILLIAMS PDF**

One of the top 5 atheist books to be published in recent times. Will our current Gods and Religions disappear in the next 100 years? The race for the most momentous change in human history has started. Discover the origins of our Gods, religions and why the world will ultimately become atheist in the next 100 years. Reading this book will fundamentally change your outlook of the world. The book fearlessly examines our current major religions, their origins, and the path of their final demise. It examines the evidence we've uncovered regarding primitive religions, evidence dominated by myth, ritual, taboo, and superstition— and shows how so much of each is still present in our current religions. The book then asks if today's gods were really always there, presiding over the world since its creation, each the ultimate Creator and Ruler of our cosmos—or if, in fact, they ever really existed? The human race's powerful dependence and reliance upon religion is then considered in detail. He describes the ordeal of a boy, trapped by a deadly sickness, using his god and religion to find answers. He also explores the psychological impact of religion on human thought and behavior throughout history. Next, Why Our Children Will be Atheists tackles the question of whether religion imbues a person with better morals and essential goodness. In particular, it critically discusses research claiming that religious children are happier and more content than their non-religious counterparts. Also examined are the powerful mechanisms that religion deploys to ensure its survival, and the use of the state to advance religion. The final section part of the book briefly outlines our current knowledge of the universe, the origins of life, and its evolution, all of which are gradually replacing our notions of Special Creation. The new, emergent phase of human spirituality is then described, representing a model that will eventually render current faiths irrelevant, heralding the beginning of a religion-free era. The last 100 years of religion is here.

The author makes a pretty huge claim in the title of his book

By Bakari Chavanu

The author makes a pretty huge claim in the title of his book, but by the time I finished reading it, I would agree that religion as we know it will possibly fade away over the next hundred years. (I just hope religious fanatics won't kill more and more people in the process.)

Williams argues his claim by first describing the origins of Christianity, Islam, Hinduism, which serves to

remind us just how archaic and irrational these religions have been, and they in the long run hold back our greatest potential as human beings. With the emergence of science, and rational and critical thinking, these religions will not be able to withstand the forces of modernity. As Williams says in his book "Our gods have never appeared to us and never will. We have fooled ourselves into creating and believing in them. It is time to propose formally the next day of our spiritual[?] and cultural development."

Quite frankly in order for us to survive and persevere, humanity will have to move past outdated religious beliefs, and use the guiding principles of humanism to fashion a better world. In the second part of the book he explains evolution — i.e. the origins of life, and the origins of us *Homo sapiens sapiens*. His descriptions of religion and evolution are clear and easy to read. One of the necessary ways that we move away from a dependence upon religious myths is that we become more scientifically literate about the origins of life and the nature of the universe, and that we better understand our human psychology.

Future generations will increasingly see that the claims of religion have no evidence, and ultimately religious practices and institutions have not and will not solve most of the world's problems. This is why the claims of this book point to the type of knowledge and confidence we need to ensure that our children and future generations are not shackled by religious dogma and confusion.

"Why Our Children Will Be Atheists" is fairly short, and most descriptive, but it's well worth the read for getting a framework about how world is changing without the need for gods and mythical beliefs.

It ain't necessarily so

By Art

I would have agreed with this author some years ago, when I marveled at the ignorance inherent in a religious versus a scientific view of the universe, but then I came to understand the Bell curve, and what it means in any given society. The fact of the matter is that most of our society is not capable of understanding a scientific explanation of life, conceives of living as primarily survival and reproduction, and believes in magic and unseen forces as controlling their lives. Religion is tribal in nature, as is most of our population. The Civil War is very much alive in the Deep South, and many people truly believe that they have a personal relationship with Jesus.

While it is true that the educated class is evolving in its beliefs as we learn more about our universe, the uneducated or religious-based educated people are not evolving at anywhere near the same rate. As far as I can see, religion will always be with us, will always be tribal in nature, and will always be divisive. It is in the nature of the beast.

I have also discovered, after researching my publication, *Bible Bullies*, that the people who use the Bible to persecute others are not interested in facts--they are "faith" based, not fact based. No number of facts will convince them that they are wrong. Evolution is wrong, for example, since Satan created the fossil record to confuse people. Try arguing with that.

I am retired, but I work with my wife, a psychologist, in furnishing the psychometric aspects of her testing. What I have discovered in the last decade is that mental illness often takes the form of religiosity, or of right-wing fanaticism. This is true in all religions, whether it be Judaism, Christianity or Islam. I've come to think recently that the terrorist activities we see--whether shooting up a family planning clinic by a Christian or shooting up a workplace party by a Muslim--are related through the common denominator of mental illness that takes the form of religious fanaticism. Blaming this on Islam and pushing for a Christian nation is eerily evocative of Hitler's declaring Germany a Christian nation and moving to fascism where nationalism and

ethnicity are paramount.

No, only the highly educated among us are evolving. The remainder of humanity still needs an opiate as a palliative for their dreary lives, and a quick and easy way to salve their consciences and believe in a better life in the hereafter. Trying to disprove their beliefs is an impossibility, and they will never read this book, if, for no other reason, they lack the intellect.

Until our society tackles ignorance and mental illness, the day will not come when religion will diminish its hold on the masses.

Great book, though I would change the title to: "The history of religions and our future without them"

By F. Mercado

The title of the book is a little bit deceiving. I am single and at first I thought that this was some sort of book whose intent was to act as guide or reasoning exercise as to why someone would raise their children as humanists or atheists. However its clear that what the author tries to convey with the title is that; in the future, our "children", in a very broad sense of the word, meaning future human generations, will be, in fact, atheists. I would change the title to something like: "The history of religions and our future without them". Had it not been for the very helpful reviews of other readers I would have probably not picked this book.

Notwithstanding the confusing title of the book, I'd like to say that this is a little jewel and that I would have actually paid for the download, and that I would have done so gladly. I got it for free, but I will certainly try to make a donation to the author.

The book is well researched and well written, it gives you a pretty good background on the history of religions throughout the development of humanity and examines how religions are no longer necessary in our modern world or at least in a near future world where reason (hopefully) will be the main drive for humanity.
